Experience

- **Bank of America** — Plano, TX
  Software Engineer II, Agents & Vulnerability Remediation — *Jul 2026 – Present*
  - Build internal AI tools for a global technology organization, including an agent that pre-validates release readiness by integrating Jira, Octane, and internal APIs to accelerate vulnerability remediation releases.
  - Drive bank-wide build trace analysis with Moderne CLI (DevCenter, MassIngest), giving senior leaders visibility into codebases falling behind on dependency updates.

  Software Engineer, Performance & Site Reliability — *Feb 2024 – Jul 2026*
  - Performance and Site Reliability Engineer for enterprise banking applications, defining SLIs/SLOs/SLAs with Product, Dev, and Production Support stakeholders.
  - Built Python/Bash release automation and an in-house test orchestrator, compressing multi-day validation cycles into hours with load profiles calibrated from production traffic.
  - Created Dynatrace and Splunk dashboards tracking p50/p95/p99 latency, error budgets, and throughput, adopted across teams as the source of truth for release readiness.
  - Won 1st Place (22 teams), 2024 Hackathon (Jira-integrated Python compliance tool, 100+ test cycles automated) and 3rd Place (400+ teams), 2025 Improve-a-thon (credential lifecycle dashboard).
- **Bank of America** — Charlotte, NC
  Software Engineer Intern — *Jun 2023 – Aug 2023*
  - Designed VuGen load simulation scripts replicating production traffic patterns on LoadRunner Enterprise, uncovering critical performance bottlenecks before deployment.
  - Integrated Dynatrace API analytics into the team's Python test harness, expanding automated observability coverage and eliminating manual data collection steps.

Projects

- **Personal Portfolio Site**: Built production-grade full-stack site — Rails 7 API-only backend (261 RSpec specs, Redis, Sidekiq, JWT auth), Vue 3 + TypeScript SPA, deployed via Terraform on AWS (CloudFront, S3, EC2, RDS) with CircleCI CI/CD.
- **Autonomous Robot Swarm**: Designed 4-unit autonomous swarm (STM32, RTOS, Sub-GHz RF) with RSSI-based triangulation achieving <1m accuracy. **1st Place**, UNLV Fall 2023 Senior Design Competition.
- **University Discord Bot**: Architected TypeScript + PostgreSQL ticketing backend serving 500+ users with 100% Jest test coverage. **1st Place**, UNLV Spring 2023 Senior Design Competition.

Skills

- **Languages**: Python, SQL, C/C++, Java, Ruby, TypeScript, JavaScript, Bash, HTML, CSS
- **Frameworks & Tools**: Node.js, Rails, Vue.js, React, Jest, RSpec, Sidekiq, PostgreSQL, Oracle DB, Redis, Docker, Terraform, AWS, Git, CircleCI
- **Observability & Reliability**: Dynatrace, Splunk, Distributed Tracing, SLI/SLO/SLA, Error Budgets, LoadRunner, JMeter, Incident Analysis Triage
- **Certifications**: CodePath Advanced Software Engineering | CodePath AI Engineering (AI110) | AWS Certified Cloud Practitioner | DataCamp AI Engineer for Developers Associate | DataCamp SQL Associate

Education

- **Georgia Institute of Technology** — Atlanta, GA (Online)
  M.S. Computer Science | Computing Systems — *Incoming Fall 2027*
- **University of Nevada, Las Vegas** — Las Vegas, NV
  B.S. Computer Science | B.S.E. Computer Engineering | Minor in Mathematics — *Graduated Dec 2023*
