EXPERIENCE

Bank of America — Software Engineer (Performance & Site Reliability) | Plano, TX February 2024 – Present

- Lead end-to-end performance engineering for multiple enterprise-scale banking applications, defining test strategies, KPIs, and SLAs in partnership with Product, Development, and Production Support teams.
- Design and execute large-scale performance and reliability tests using LoadRunner Enterprise (C, Java), JMeter, and bash-based workloads, ensuring coverage for both UI and backend systems.
- Maintain and optimize dedicated load test environments, including data management, user provisioning, automation pipelines, and dynamic workload calibration based on production telemetry.
- Analyze complex incidents with Dynatrace and Splunk, conducting distributed trace analysis to isolate performance regressions and improve incident resolution time.
- Develop and maintain dashboards in Dynatrace and Splunk to visualize system performance, application health, and release readiness, enhancing observability across distributed teams.
- 1st Place, 2024 PECM Hackathon (22 teams): Designed and deployed a Jira-integrated mailer system using Python and internal APIs to automate compliance communications across 100+ performance test cycles.
- 3rd Place, 2025 APS&E Improve-a-thon (400+ teams): Developed an Access Manager Dashboard to reduce onboarding toil, out of date software, and downtime risk by automating expiration alerts.

Bank of America — Software Engineer Intern | Charlotte, NC June 2023 – August 2023

- Simulated user behavior using VuGen scripts for system-wide performance testing on LoadRunner Enterprise.
- Maintained test environments to accurately replicate production workloads and ensure reliable performance.
- Enhanced Python scripts to integrate Dynatrace API analytics, increasing observability and test accuracy.

PROJECTS

Autonomous Mobile Robot Swarm — Hardware Engineer (1st Place)

Team of 4 | UNLV Winter 2023 Senior Project Design Competition

- Designed a mobile robot swarm (4+ units) for autonomous planetary exploration using STM32 MCU, 9-DoF IMU, Sub-GHz RF, RTOS, and RSSI.
- Engineered RF RSSI-based localization to maintain communication and triangulate unit positions in real time.

University Discord Bot — Backend Engineer (1st Place)

Team of 10 | UNLV Spring 2023 Senior Project Design Competition

- Built a scalable ticketing system with TypeScript, PostgreSQL, React, and Discord.js.
- Achieved 100% code coverage for Ticket and User controllers via Jest unit tests.

SKILLS & CERTIFICATIONS

Languages: Java, Python, C++, JavaScript, TypeScript, Ruby, HTML, CSS

Tools: Git, BitBucket, Oracle DB, PostgreSQL, AWS, LoadRunner, JMeter, Splunk, Dynatrace, Node.js, React, Tableau

Certifications: AWS Certified Cloud Practitioner • CodePath Certified Advanced Software Engineering

EDUCATION

University of Nevada, Las Vegas

Graduated December 2023

Bachelor of Science in Computer Engineering

Bachelor of Science in Computer Science

Minor in Mathematics

AFFILIATIONS

Society of Hispanic Professional Engineers (SHPE) — Member

2023 – Present

CodePath — Advanced Software Engineering Alumni

2022 – Present

Nepantla Program — Alumni, Nevada State College
